

## # Project SHIVAM Notes 02

### ## HTML

- HTML = Structure
- Semantic tags improve readability.
- class = reusable
- id = unique

### ## CSS

- Flexbox for layout.
- Grid for product layout.
- gap = spacing.
- flex:1 / flex:2 = space ratio.

### ## JavaScript

#### ### Variables

- const = value/reference won't be reassigned.
- let = value can change.

#### ### DOM

- document = entire webpage.
- querySelector() = finds first matching element.

#### ### Events

- onclick runs when user clicks.

#### ### Functions

- Store instructions to execute later.

#### ### DOM Manipulation

- innerText = read/change visible text.
- value = read user input.

#### ### Arrays

- Store multiple values.
- Zero-based indexing.
- length = number of items.

#### ### Loops

- for loop repeats code.

#### ### Objects

Example:

```
{  
  name,  
  price,  
  rating  
}
```

Access:

products[i].name

products[i].price

products[i].rating

## Debugging

- Console is your first debugging tool.
- Read code -> Predict -> Run -> Verify.
